# TOUROS 260KG GRANITE BASE

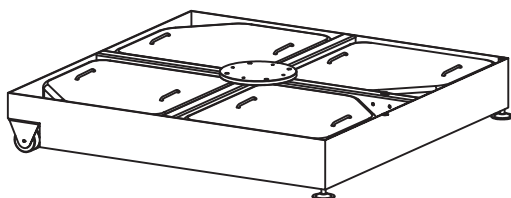

Step 1 Place the base on the ground and use a hex wrench to adjust the height of the two foot pads so that the base is level

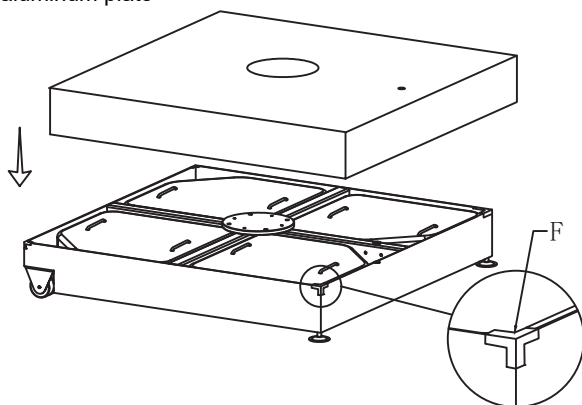

Step 2 Place eight pieces of marble in turn

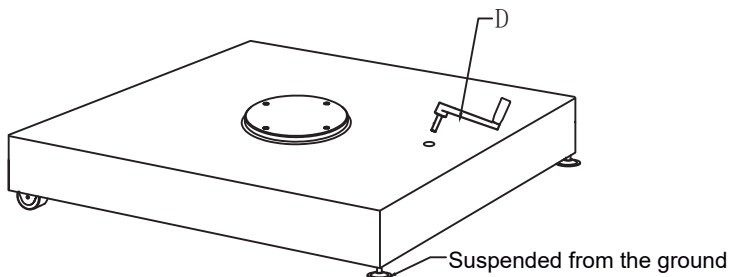

Step 3 Note the Angle of the marble

Step 4 Mute the four corners with corner pads, then cover the aluminum plate

Step 5 To move the base, turn the crank clockwise, lift the two pads off the ground, and then push the base. (The handle is the same as the umbrella handle)

Step 6 When the base is not used for a long time, the dust cushion is inserted into the handle hole to avoid debris and rain affecting the use of the product
